

EXERCISE

What	Why	How
Download a shape-file	Look at the geographical division and try to download a shape-file to your computer.	http://www.diva-gis.org/gdata
Look how to upload shape-files	You need to accept access to your Google-account. Don't upload during the exercise. It will take too long time and the connection might break.	www.shpescape.com
Find a Fusion-file	The file is called "Bulgarian regions farm subsidies 2010" and has the id: 1756707	
Merge Fusion-files	Merge with a shape-file on Bulgarian regions with the id: 1756140	
Give the merged file a name and save it as public.		
Configure info window	Work to get a nice view in the window with text and evt. graphics (Google Chart works inside the info-window). See example here: http://www.google.com/fusiontables/DataSource?snapid=S283740uHnk	
Configure styles	Think and work to get the right levels and colors.	
Edit styles even more	Find the id for your Fusion file and edit it here to fit better to a website. Make it the right size and what you else want of. Get the code for the website and save it as a htm-file. Embed the map in your story. See example here: http://www.kaasogmulvad.dk/unv/fusion/bulg.htm	http://gmaps-samples.googlecode.com/svn/trunk/fusiontables/fusiontableslayer_builder.html
